Security of information

10 Decisions that protect your customer/prospect data

01

A WORLD-CLASS DATA CENTER

Our hosting strategy led us to choose a world-class Data Center located in France, which allows us to benefit from the highest international standards in data hosting. Our provider complies with SOC-Type 1 and 2, ISO 27001, NIST 80-55, FISMA, PCI DSS, HIPAA, HDA/HADS, OHS AS 18001, ISO 9001, ISO 22301, SS 564, TSI (TÜV-IT). It also complies with ISO 14001 and ISO 50001 environmental standards.

02

MINIMIZED RISK

Our system has been designed to offer total continuity of service since our infrastructure is highly available, redundant and scalable. It adapts to the traffic and in case of loss of a server, other servers take over, thus guaranteeing a continuous operation of the platform.

03

A TECHNOLOGY DESIGNED FOR SENSITIVE ENVIRONMENTS

Client spaces are a privileged place to collect sensitive information but they are also spaces where security standards must be higher. The introduction of third-party tags in customer spaces is facilitated by the use of server-side. Thus, you have control over the entire data life cycle: from collection to exploitation by partners.

04

FULL CONTROL OVER THE DATA

With its Data Cleansing feature, Commanders Act X introduces a layer of data normalization along with a real-time monitoring system. Advanced filters are also available, allowing you to automatically control the data sent to partners.

05

A FINE MANAGEMENT OF USER RIGHTS

Access for your users (employees or agency/SSII) can be restricted to specific IPs. In addition, we offer some of the strictest password rules available. Production can be limited to one or more profiles (read, modify, deploy). User history is automatically generated and provides access to a logbook listing actions, comments and user profiles.

06

PROVEN GDPR COMPLIANCE

Commanders Act publishes a natively integrated consent solution. It is also the first company to publish a Tag Management solution that has obtained the recognition of approved bodies in Europe: [CNIL exemption](#) in France and the [Eprivacy Seal](#) in Germany. This German label, which confirms the respect and anticipation of the constraints associated with the entry into force of the RGPD 2018, was obtained for our Tag Management, Data Management and Attribution Management solutions.

07

TECHNICAL TEAMS TRAINED IN SAFETY

Certified organizations train our technical teams in security, which is the foundation of our platform design (Security by design). Thus, our technical teams are always at the forefront of new technical challenges in terms of security.

08

A RECOGNIZED PLATFORM FOR DEMANDING CUSTOMERS IN THE FIELD OF SECURITY

Commanders Act has convinced major players in the e-commerce, travel, and banking-insurance sectors for the robustness of its platform. It has also convinced government and institutional players (Army, Ministry of Education, Pôle Emploi, CNAM, EFS), all of whom are faced with ever-increasing security constraints.

09

A PLATFORM THAT IS REGULARLY AUDITED AND THEREFORE COMPLIES WITH CUSTOMER REQUIREMENTS

Our platform is successfully audited every six months by external teams. The audits include Pentest, black box and grey box testing. We allow our customers to audit us in order to ensure full compliance of our platform with their own security standards. We have successfully passed security audits for the French Army, the French Government Information Service and major French and European banking groups.

10

A SECURE DATA EXCHANGE TECHNOLOGY

Thanks to the Server-Side technology, the data no longer passes through the Internet user's browser but directly through the server. It allows you to have total control over the sending of data. As a result, the platform offers you real-time quality control through automatic verification of incoming data.
